THE FUTURE OF WELLNESS IS LOOKING BRIGHT.

Resonant Light Technology is well grounded in the research & development of integrated light and sound technology for the purpose of controlling microorganisms. We spent the last 30 years researching frequency technology and introducing inquiring minds like yours to the science behind it, its applications and its benefits.

Our philosophy is simple. We are professional and honest. We're here to assist anyone researching "Rife Frequencies" or Pulsed Electromagnetic Fields (PEMF) by providing quality information, simple answers and direct access to highly trained frequency consultants while offering outstanding support along the way.

Since our inception in 1996, we've been a beacon of light to thousands and thousands of wellness enthusiasts worldwide. We would be truly honoured to be part of your journey as well.

Wishing you love, light and warm blessings always!

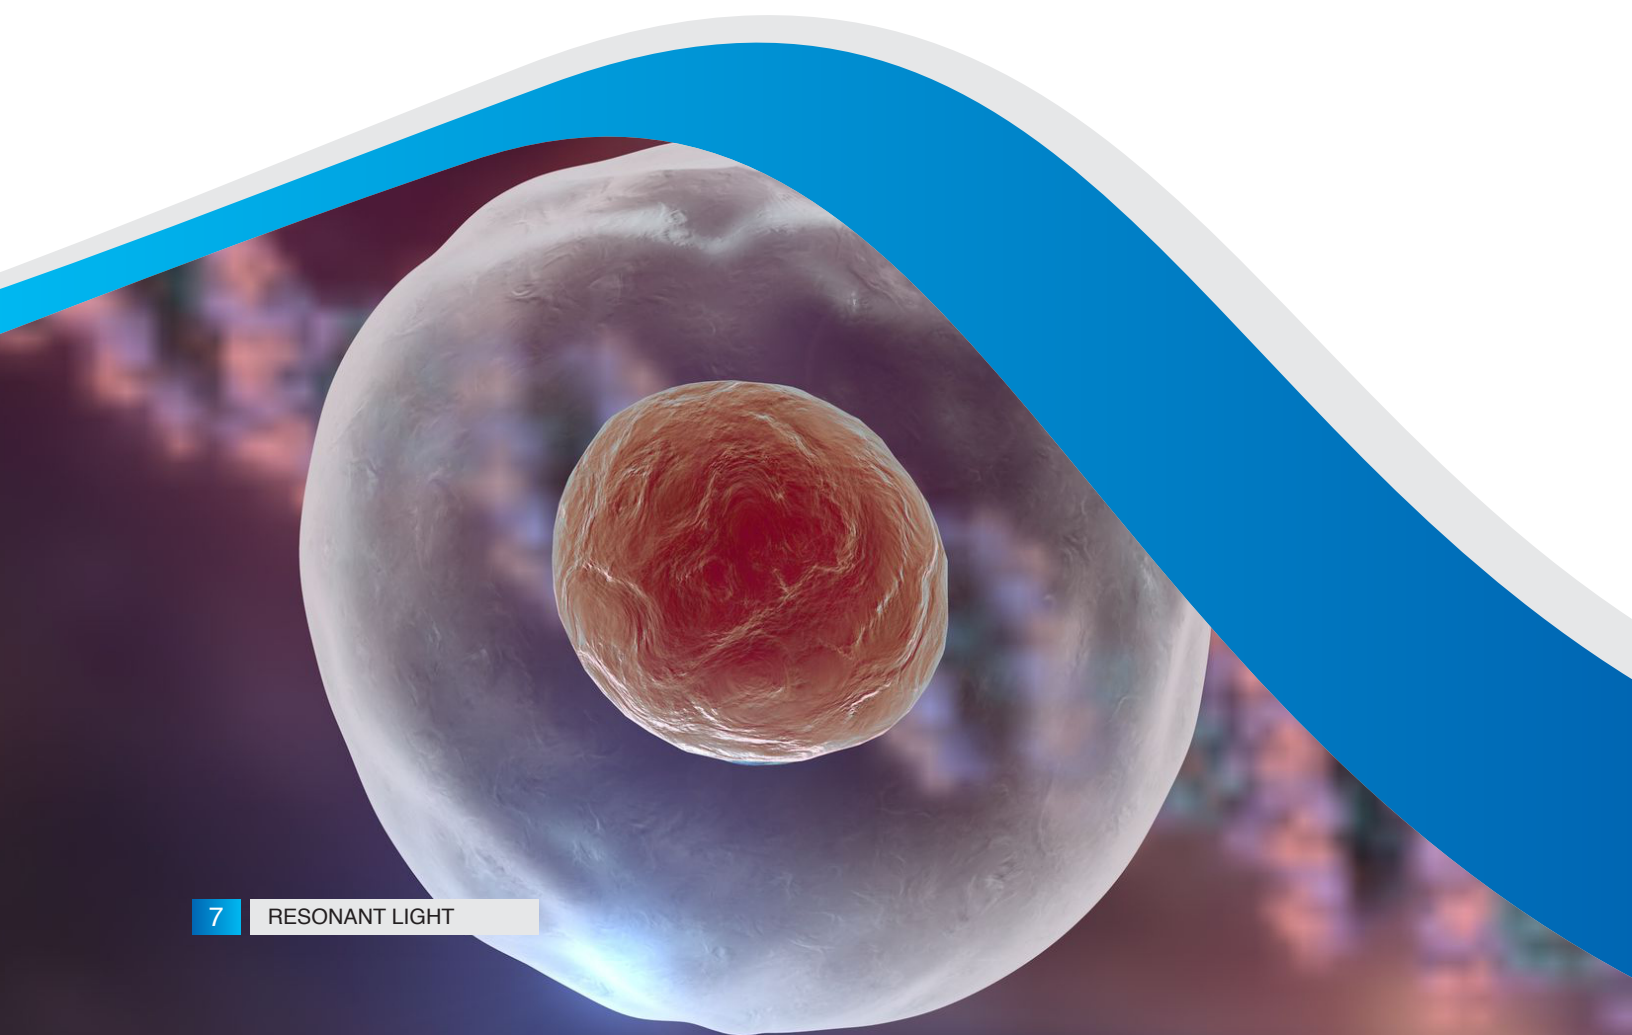

Edna Anne Tunney

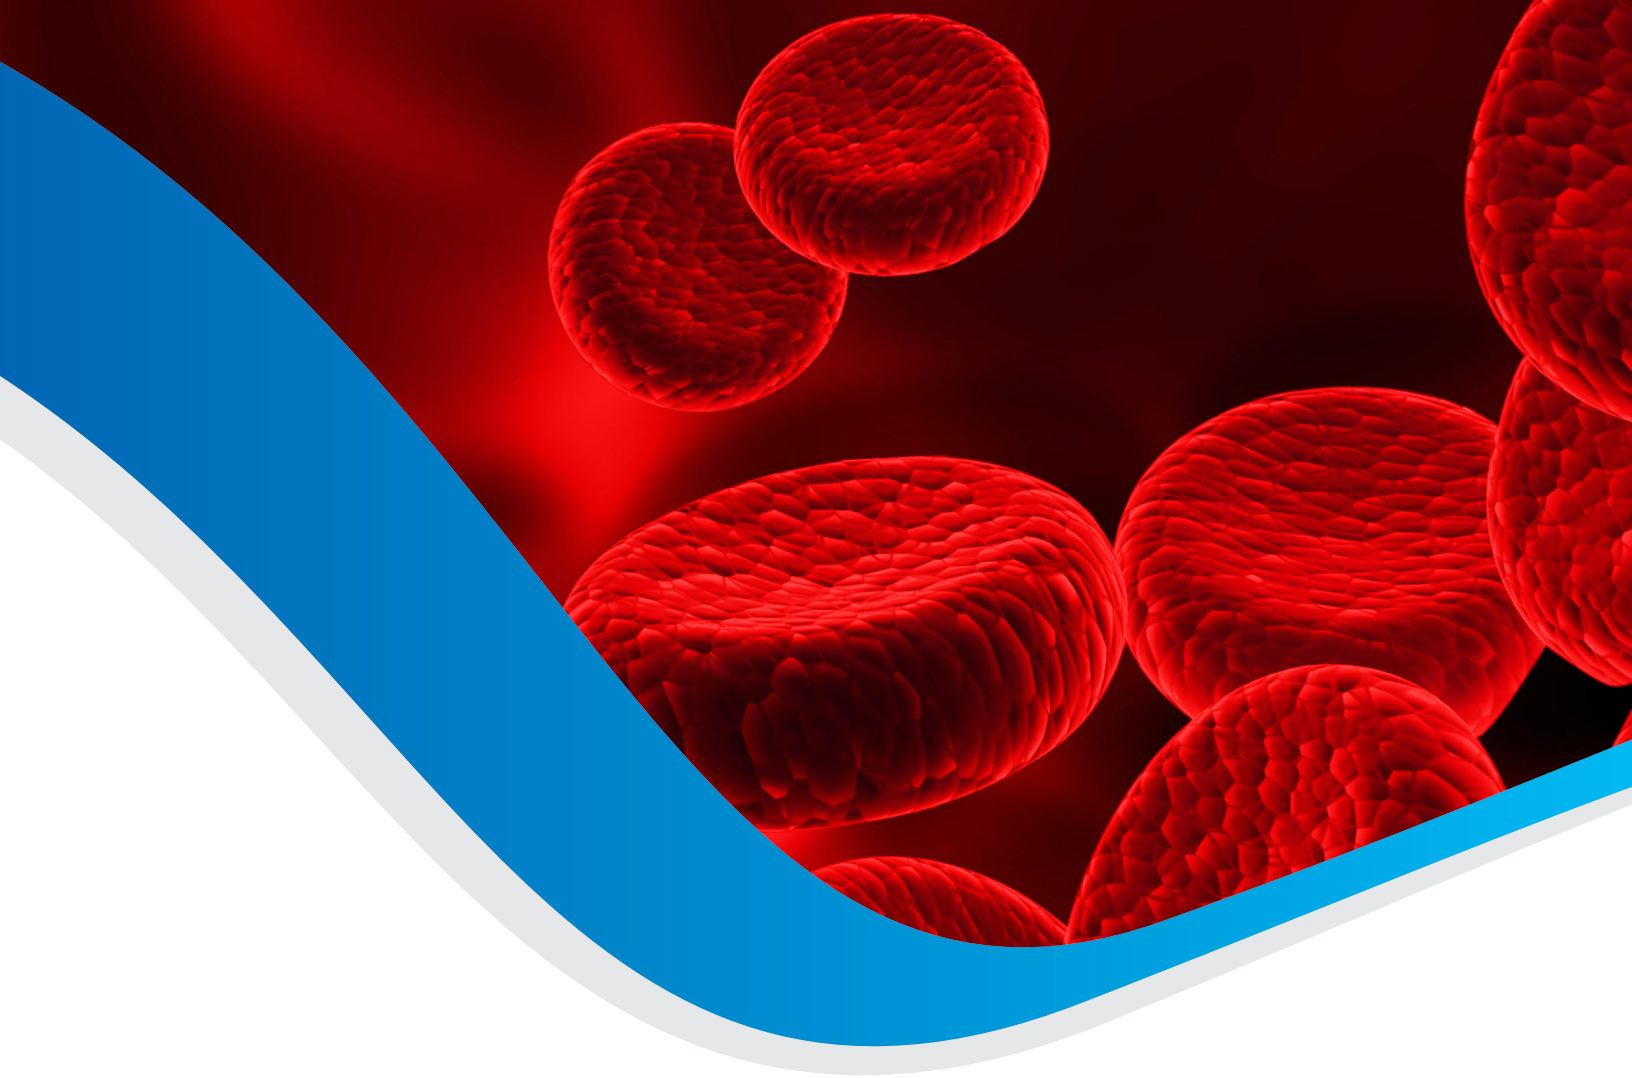

President

THE SCIENCE BEHIND FREQUENCY TECHNOLOGY

The technology is based on sound and light used for the purpose of controlling micro-organisms (pathogens). It was first developed by Dr. Royal Raymond Rife in the 1930s. Its principle is based on two basic phenomena occurring in the human body.

Firstly, because cells, organs and are electrical in nature, there are many biological interactions that occur at the cellular level when the pulsed electromagnetic field emanates from a frequency device. It is understood when such an instrument is running on any frequency, the body takes on an electrostatic charge. This process raises the electrical voltage of the cells, which excites the cells in the body and enables them to communicate with each other more effectively. This enhanced communication in turn, assists the body in becoming more balanced – working towards homeostasis. In other words, frequency devices are tools that support the body in its repair process.

Secondly, based on the premise that all living matter vibrates to a specific frequency, it is known there is another major occurrence in the body when a specific pathogen resonates with a specific frequency. When this matching resonance of the pathogen and the emanating frequency occurs, the life force of the pathogen is immobilized or devitalized and what we then have is killed off. The receiving subject may then experience a Herxheimer reaction or detox.

Overall, frequency technology not only targets microorganisms and regulates the immune system, but it also aims to drastically reduce pain, harmonize the body, repair tissue, speed up post-surgery recovery, and boost the healing of fractured bones. Frequency devices typically have a calming effect on hyperactivity and high stress loads. It is often used by many during meditation or contemplation. The effects of PEMF on the cellular level are numerous, and include promoting detoxification, enhancing nerve repair, improving circulation, plus easing both depression and insomnia. Ultimately, the immune system becomes healthier and the nervous system relaxes. Wellness on all levels is changed, thus contributing to one's longevity.

A FREQUENCY-EMITTING DEVICE

A FREQUENCY GENERATOR

A frequency generator (aka “TENS” or “Micro-current” device) emits electrical frequencies. High-quality units are extremely precise and can be programmed by an end user.

01

A RADIO FREQUENCY “CARRIER”

Electrical frequencies pulsed from the frequency generator are changed to pulsed electromagnetic fields (PEMF). In many frequency-emission devices, the signal is amplified and paired with a “carrier” so frequencies travel farther. This provides freedom of movement during use. Other machines use electromagnetic coils instead of a glass tube and a carrier, so users must be within inches of the device or tethered to it.

02

A FREQUENCY EMITTER

Electromagnetic frequencies are emitted by the device. glass tubes can emit numerous higher frequencies, while coils have stronger magnetic emissions.

03

*Dr. Royal Raymond Rife, the
inventor of frequency-emis-
sion technology, circa 1930.*

A RESEARCH TIMELINE

Studies date back to the 1930s when Dr. Royal Raymond Rife developed a new treatment method that many of the greatest minds of the time believed could end all disease.

While the technology was suppressed for a time, authors such as Barry Lynes (*The Cancer Cure That Worked*), Dr. Nenah Sylver (*The Rife Handbook*), Dr. James Oschman (*Energy Medicine: The Scientific Basis*) and Brian McInturff (electroherbalism.com) have been instrumental at educating the public about this technology. This has sparked a whole new generation of independent studies and successes, most notably from Dr. James Bare (rifetechnologies.com) and Dr. Anthony Holland (novobiotronics.com).

1925

Georges Lakhovsky

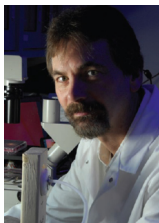

Dr. Lakhovsky studies cellular oscillation. In 1925, he writes a Radio News Magazine article entitled "Curing Cancer with Ultra Radio Frequencies".

1993

James Bare

Fascinated by Dr. Rife's work, Dr. Bare builds his own "Rife machine" prototype. His findings get international recognition from the scientific community.

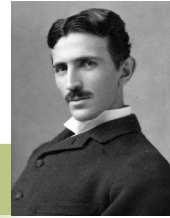

2008

Anthony Holland

Dr. Anthony Holland achieves devitalization of up to 70% cancer cells using frequencies. He continues his fascinating research to this day with a new lab opening in Florida by the end of 2024.

1890

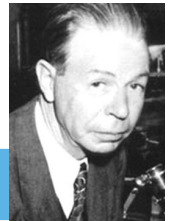

Nikola Tesla

Dr. Tesla's work with electricity and energy revolutionizes modern science and the way we approach frequency concepts.

1929

Royal Raymond Rife

While pushing innovation in microscope technology, Dr. Rife builds a machine that uses Radio Frequencies (RF) to devitalize cancer cells, called the "Rife machine".

1996

Donald Tunney

With a desire to push Dr. Bare's design even further, Don Tunney founds Resonant Light Technology where he builds a series of prototypes, called Rife-Bare-Tunney (RBT). The evolution of these prototypes lead to the creation of the PERL device.

5

QUESTIONS TO DR. JAMES BARE

Dr. James Bare is one of the most trusted and most knowledgeable scientist to pursue Dr. Raymond Royal Rife's work on frequencies.

Q. What is frequency therapy?

The use of frequency instruments has been around for well over a century. There are many, many devices in common usage that depend upon the use of frequencies. Those frequencies often are specific to the production of a desired physiological effect. In the case of frequency-emission devices, frequencies are used to target microorganisms and non-beneficial cells resulting from a multitude of ailments.

Q. What is the biggest misconception about this technology?

There are a lot of urban legends and hype combined with outlandish claims associated with

anything called “Rife”. These stories have created unrealistic expectations. Too many manufacturers are putting the word “Rife” on their devices and then promoting the idea that the device is some sort of panacea. There becomes an expectation of quick success. Success, if it comes, can be slow and gradual. All devices are this way. The path to health is not a straight one and is why the customer service and counseling offered by Resonant Light are so important.

Q. Are there any contraindications to using this technology?

The effects of frequency-emission devices are non-thermal. This is, they occur without creating heat. As such, the PERL is very gentle. Side effects would be detox reactions which could manifest as diarrhea, nausea or general malaise. Like all devices, there are cautions to its use :

- Do not use the device within 36 hours of administration of chemotherapy medications.
- As a simple precaution, avoid using around anyone that is pregnant.
- If the tube is being pulsed, be careful around someone that is subject to seizures. The pulsed light might set off one.
- Refrain from touching the tube while it is lit. Do not stand closer than 10 inches from the glass tube.
- Individuals with organ transplants or stem cell transplants are advised to avoid frequency devices as their immune boosting effects may be contraindicated.
- Individuals using defibrillators are advised to avoid frequency devices.
- Individuals using pacemakers manufactured before 1992 are advised to avoid these devices due to the pacemaker's inadequate frequency shielding.
- Using an oxygen tank within 20-feet of frequency-emission devices is not recommended. Oxygen concentrators are ok.
- Generally speaking, frequencies less than 5 Hz are not recommended for prolonged periods of time.

Q. What is the range of frequency-emission devices?

The frequencies created by the PERL offer the largest effective range of any frequency device. A general rule of thumb is 30 feet all around the frequency emitter. This has been proven by “rifing” session Donald Tunney used to run at Resonant Light Technology. People would come and sit, some of them over 50 feet away from the tube. Participants would fill a questionnaire about their experiences and results of these sessions. I have seen a few of

these: they were amazing reports!

Q. Do you have tips for anyone looking to buy a device?

There is so much hype on the internet, people are confused. Is there some sort of research that actually shows an effect of the device upon cancer and infectious micro-organisms? Most devices have nothing except to claim some relationship to Dr. Rife. All sorts of claims and implied action are made with no real proof. There are frequency devices on the market that are partially based upon an old Rife instrument, but this is NOT that old Rife instrument.

The PERL, being an evolution of my own devices, has supporting published research that is publicly available and shows efficacy. If a manufacturer claims there is research on their device, has that research been made public? Not just claims, laboratory proven publicly available documents. The PERL, being a Rife-Bare device, is the only device on the market that has shown to the public actual results to its use on cancer cells, had case studies published and has multiple published and presented papers on its use. Resonant Light's PERL is the real deal.

RELEVANT STUDIES ON FREQUENCY TECHNOLOGY

Thousands of independent studies have been conducted on a wide variety of afflictions, with often times stunning results. The following list provides a small sample of studies our team has gathered for you. To learn more details about these researches, visit www.ncbi.nlm.nih.gov/pubmed and enter the PMID numbers listed below.

ARTHRITIS

PMID 20329696

Conclusion of study : “... Conclusively shown that PEMF not only alleviates the pain in the arthritis condition but it also affords chondroprotection, exerts anti-inflammatory action and helps in bone remodelling...”

Worth nothing : “also estimated the median lifetime costs (i.e. 25 years following a diagnosis of [Rheumatoid Arthritis] to be \$61,000 to \$122,000 USD (in 1995).

ERECTILE DYSFUNCTION

PMID 17882824

Conclusion of study : “Recovery and improvement of the erectile function were achieved in 85.7% of patients.”

PMID 8819933

Conclusion of study : “beneficial effect was recordable in 70-80% of the patients...”

CANCER

PMID 22761760

Conclusion of study : “Together these results demonstrated that PEMF exposure significantly increases the anti-tumour effect.”

Worth nothing : “New drugs often cost \$100,000 or more a year... And insurers differ on how much they cover.”

FREQUENCY DEVICE SAFETY

PMID 20329696

This study covered the safety and efficacy of a new device combining radio frequency (RF) and low-frequency pulsed electromagnetic fields (PEMF).

“The results of this study show that the combination of multipolar RF with PEMF is a safe, effective, and painless approach to treat facial rhytides and is suitable to answer the demands of patients for safe treatments without pain or downtime.

FIBROMYALGIA

PMID 18080043

Conclusion of study : “Low-frequency PEMF therapy might improve function, pain, fatigue, and global status in FM patients.”

OSTEOPOROSIS

PMID 19080282

Conclusion of study : “After 12-week interventions, the results showed that PEMF increased serum 17 beta-estradiol level, reduced serum tartrate-resistant acid phosphatase level, increased bone mineral density, and inhibited deterioration of bone microarchitecture and strength.”

PMID 2195843

Conclusion of study : “The data suggest that properly applied PEMDs. If scaled for whole-body use, may have clinical application in the prevention and treatment of osteoporosis.”

OSTEOARTHRITIS

PMID 22451021

Conclusion of study : “The results suggest that non-thermal, non-invasive PEMF therapy can have a significant and rapid impact on pain from early knee OA and that larger clinical trials are warranted.

STROKES

PMID 17892036

Conclusion of study : “Preliminary data suggest that exposure to a PEMF of short duration may have implications for the treatment of acute stroke.”

STROKES

PMID 19008935

Conclusion of study : “PEMF is a safe and effective adjunct to non-surgical therapy for recalcitrant venous leg ulcers.”

MEET THE PERL

The New PERL is a non-contact, non-invasive electronic device that emits a Pulsed Electro-Magnetic Field, commonly referred to as PEMF. It creates an electrostatic charge at the deepest cellular level in the body with the ability to change the biological terrain for beneficial change. The particular frequencies transmitted from the glass tube not only target the problem area but help bring the entire body to a level of homeostasis - boosting the immune system. The New PERL has the ability to run up to three ProGens simultaneously, for increased benefits and shortened run time.

Its greatest advantage is the complete freedom of movement within 30 feet of the device. You get to move around freely while getting the best frequency delivery in the industry. Plus, you'll safely share all the benefits with your loved ones, your pets and even your plants !

AND THE PROGEN

The ProGen is a sophisticated frequency generator, which can be used on its own as a contact device, essentially a micro-current device, similar to a TENS unit. It can generate frequencies in a range of 1 Hz to 4,000,000 Hz as either single frequencies, or a formation of various wave packets in Square, Sine or Triangle wave shapes. It also introduces our exclusive Sine Progression wave packet.

The ProGen contains over 2,000 frequency Sets, including all the Sets from the Consolidated Annotated Frequency List (CAFL). This means instant access to thousands of frequencies for thousands of conditions, right at your fingertips.

Whether the ProGen's frequencies are delivered by the PERL or via contact accessories, just sit back, relax and let the frequencies do the work.

PERL Packages

STANDARD Everything you need to get started.

PERL	ProGen	Glass Tube	PERL to ProGen cable	Electrode Cables ^{x2}	International Adapters	
Setup Videos	Operation Manuals	Maintenance Kit	2-Year Limited Warranty	Lifetime Support	Shipping Included	

EXECUTIVE Twice the speed. Twice the efficiency with multi-signalling.

PERL	ProGen ^{x2}	Glass Tube	PERL to ProGen cable ^{x2}	Electrode Cables ^{x2}	International Adapters	
Setup Videos	Operation Manuals	Maintenance Kit	3-Year Extended Warranty	Lifetime Support	Shipping Included	

PREMIUM For the optimal experience with the shortest session times.

PERL	ProGen ^{x3}	Glass Tube	PERL to ProGen cable ^{x3}	Electrode Cables ^{x4}	
International Adapters ^{x2}	Setup Videos	Operation Manuals	Maintenance Kit	5-Year VIP Warranty

10 THINGS TO KNOW WHEN BUYING A RIFE MACHINE

KNOW WHAT A RIFE MACHINE ACTUALLY IS

1. A Rife Machine utilizes a Frequency Generator (also known as a TENS machine or a Microcurrent device) to supply the frequencies that will be emitted. Most frequency generators can also be used as a standalone TENS device when used with accessories, such as electrode pads.
2. A Rife Machine emits Pulsed Electromagnetic Fields (PEMF) using a Glass Tube, as opposed to other types of PEMF devices that use magnetic coils.
3. A Rife Machine uses a Radio Frequency (RF) to deliver PEMF to users in a safe, easy and non-contact manner – just like your favourite radio station delivers music to your stereo. This allows freedom of movement, multiple users, and it reaches every cell in the body at one time.

KNOW WHAT YOU NEED IT FOR

Is the challenge you need to address on the surface level, or deep into the cellular level? Will you only be using it for relaxation and stress management, or is there a major issue that needs addressing? Will you be using it for a single issue, or will this be used for a variety of ailments over a long period of time?

As different machines have varying capabilities, be sure that the challenges you are dealing with can be efficiently addressed with the unit you plan on purchasing, and also consider what you may want it for in the future.

Dealing with stress or relaxation can often be done with frequencies under 25 Hz, while addressing organs may require frequencies up to 40,000 Hz. Some viruses and bacteria require a machine that can emit over 100,000 Hz accurately, and while many contact-type frequency generators can achieve this, only a few Rife machines can.

For a wider range of uses, get a Rife Machine that is accurate from 1Hz to over 150,000Hz. In technical terms, that would be “100% modulation” within the specified range.

KNOW WHICH AREAS NEED THE MOST ATTENTION

Skin, muscles, blood flow, pathogens and viruses, organs and mental relaxation can all be targeted by frequencies. There are better ways to achieve each goal based on the frequencies used, machine capabilities and usage frequency. For example, to target a virus, the frequencies used should resonate with the virus for a long enough period of time to devitalize its life force, so knowing which virus to target is the best place to start.

Skilled frequency technicians and knowledgeable practitioners are the best ones to create these programs, which should come along with appropriate usage schedules and high-level customer support. That being said, thousands of users are experimenting with frequencies every day. Not all preprogrammed frequency banks are equal to the task. Some devices have thousands of “preprogrammed banks”, but each bank is only a frequency or two with very little specialized knowledge used in its creation, such as complementary frequencies and “gating” (pulsing) for maximum effect.

Be sure to consider a device that comes preprogrammed with the banks of frequencies that will address the issue(s) that prompted your decision to learn more. Even frequency experts will normally utilize preset programs, supplementing with customized frequencies as they see fit.

DO NOT PUT FAITH IN COMPETITIVE COMPARISON CHARTS

These charts prey on people who are non-technical or simply don't recognize what has been omitted, misrepresented or downplayed.

They are generally inaccurate, outdated, and are always created to make a particular machine look better than the others.

HAVE YOU EVER USED A FREQUENCY DEVICE?

This can simplify the process of choosing the best new device as you probably have a higher level of understanding than most.

Consider what you like about the machine you have and what would make it better. You can then talk to your sales agent about your priorities and whether the devices they offer give you what you need.

KNOW IF YOU ARE WILLING TO INVEST IN TRAINING

Some Rife machines are easy to use right out of the box. Some require extensive training to be usable. The complicated machines are usually directed towards professionals who will focus solely on utilizing that machine in their practices.

Consider the main users of the unit you are going to purchase and whether every person is willing to spend the time and money it takes to learn how to use the machine effectively. Many practitioners and home-users prefer a user-friendly machine in combination with vv that is available to answer questions that may come up.

WILL YOU BE TRAVELING WITH THE UNIT?

If you want to move the unit at all, whether it's from the office to home or farther, size can be a deciding factor. Some units are bigger than a shower stall, while some can fit into your carry-on luggage.

KNOW IF THERE WILL BE A SINGLE USER OR MULTIPLE USERS

If there will be multiple users, not only will you require simplicity, but concurrent usage by all users at one time may factor into your decision-making process.

The non-contact Rife machine emits frequencies through a glass tube, bathing everything within the unit's range with gentle PEMF. This is also beneficial for those who require freedom of movement during usage.

Most units that misrepresent themselves as Rife machines are only good for one user at a time, as they are in fact electrical frequency generators that require skin contact.

DO THEY DEAL FROM A PLACE OF INTEGRITY?

How long have they been in business? Longevity speaks volumes.

If you have any acquaintances who have purchased from the company, ask them about their experiences. Remember to ask about customer service.

Don't get caught-up on reseller sites that parrot the company line.

Do they talk about their competitors? Is what they say honest, current and accurate? If not, how can you believe anything else they are saying?

WHAT IS YOUR BUDGET?

Actual Rife Machine prices can run from about \$5,000 to over \$40,000. Consider your requirements and the company's reputation when making your decision.

Remember - Rife machines treat the entire body at the cellular level and can be used on more than one subject at a time.

Frequency generators such as TENS and Microcurrent devices can often be purchased for a much lower price; however they do not penetrate as deeply.

20

REASONS TO CHOOSE RESONANT LIGHT TECHNOLOGY

RESONANT LIGHT TECHNOLOGY

1

28 YEARS

2024 marks the 28th year Resonant Light Technology has been providing the highest quality Rife machines on the market to clients worldwide.

2

FLAWLESS ACCURACY

Each PERL is individually calibrated, tuned and tested for accuracy and optimal functionality for 90 hours prior to shipping.

3

30-FOOT RADIUS

The PERL has a 30-foot radius. This allows many plants or animal subjects to experience sessions simultaneously.

4

90-DAY BUY-BACK

90-day Buy-Back Policy on all new PERL devices.

5

LIFETIME SUPPORT

LIFETIME SUPPORT for as long as you own your device! No matter your need, we're just a phone call away. For life.

6

SERVICE

Friendly, dedicated staff are available Monday to Friday, 8:00 am to 5:00 pm (PST) to answer any question you have. We want to ensure you get the most out of your device from the first day you receive it.

7

WELL-RESEARCHED

We've collected over 250,000 hours of research data from lab testing, user feedback and empirical evidence. We also work with Dr. James Bare, one of the most trusted experts in the Rife community.

8

WARRANTY

The best warranty in the industry. 2-year parts and labor warranty on all devices. Optional 3-year and 5-year extensions that includes warranty-related shipping, both ways!

9

VERSATILE

The PERL is capable of running with up to 3 frequency generators simultaneously – thus reducing session time and increasing effectiveness.

10

HONEST

Resonant Light's expert consultants and in-house technicians are available for highly technical queries. Our focus is on providing you with clear, honest information on the devices we know best - our own.

11

INNOVATION

The new PERL is the 12th generation of PERL. We are constantly improving our equipment - the first device was 55 lbs, while the PERL is now a compact, light and yet very sturdy 8.1 lbs!

12

TRUST

We have thousands of devices used all over the world today and we proudly support each one of them to this day!

13

PROFESSIONAL

We have many practitioners (DCs, NDs, MDs, etc.) utilizing and validating the efficacy of our equipment.

14

EVOLUTION

The ProGen 3 is in its 10th generation and is accurate to an amazing 0.001 of a Hertz.

15

APPROVED

The PERL was approved by Health Canada for 4 years. No other glass tube device has been approved by a health authority anywhere in the world - not even Rife's original units.

16

QUALITY

QUALITY products built to last. Each device is tested and tuned for up to 90 hours before it is shipped to you for a pristine frequency experience. Every time.

17

INTEGRITY

We are a company that believes in operating with integrity at all times.

18

DEDICATION

We have separate teams dedicated to support, manufacturing, shipping, accounting, sales and development. We are a serious operation that manufactures top-quality devices. Every team has people available to assist clients in any way we can.

19

CANADIAN

We are proud to be a Canadian Manufacturer since 1996.

20

MISSION STATEMENT

We manufacture and produce the finest quality and the most effective equipment possible while supporting our clients that use it. Together, we believe in, and work towards, contributing in making this world a better place in which to live.
